

SPRING CLEANING CHECKLIST

○ CHANGE YOUR FILTERS

One of the quickest and simplest ways to improve the air quality of your home is to change your HVAC system's filter.

○ CLEAN YOUR REGISTERS & RETURN AIR VENTS

Registers and return air vents can hide dust. Including them in your HVAC spring cleaning regimen is another way to eliminate unwanted allergens and improve system efficiency.

○ CLEAN OUTDOOR UNIT

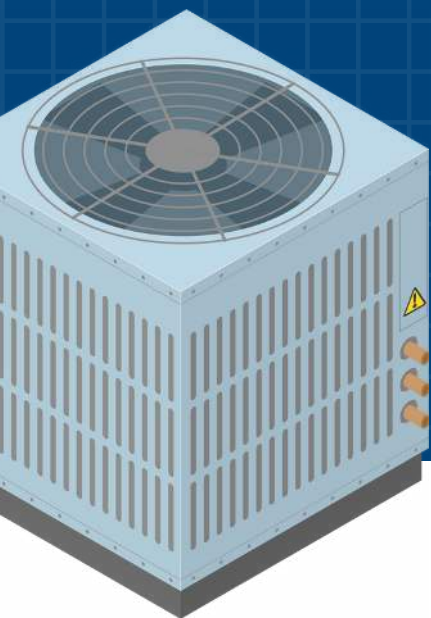

Spring HVAC cleaning and maintenance includes ensuring your exterior unit is clean and free of debris.

○ ADD NATURAL FILTERS

Spring is an ideal time to add houseplants to your home because the season aligns with the natural growth cycle of most plants.

○ ROTATE YOUR CEILING FAN BLADES

In addition to rotating your blades, wiping the dust and build up will help with the overall air quality in your home.
